

SAS Air Samplers Service & Calibration

UK Pricing Effective from 1st January 2024

We offer a full after-sales service for all models of SAS microbial air samplers. This includes free telephone support and advice on fault diagnosis, use and best practices. We provide a recalibration reminder service a month before your unit is due and also have hire units available.

The manufacturer's recommendation is that your SAS sampler should be recalibrated at least annually. An 'As Found' reading will be taken on receipt of your instrument, followed by a full service and then a final calibration. The certificate will detail the 'As Found' and 'As Left' readings recorded and any adjustments made.

Please ensure that you return all parts of your instrument so that a full operational check can be made on the instrument.

For customers requiring written quotations, please contact Cherwell on 01869 355500 or service@cherwell-labs.co.uk stating the number of units to be serviced.
